

## OPERATING RANGE

|                          |                     |
|--------------------------|---------------------|
| Flow rate of up to       | 5 m <sup>3</sup> /h |
| Manometric head of up to | 8 mWC               |
| Max. operating pressure  | 6 bar               |
| Min. suction pressure    | 0,3 bar at 95°C     |
| Temperature range        | -10°C at 95°C       |
| Max. ambient temperature | +40°C               |
| EEI-Part 2               | ≤0,20               |

The reference criterion for the most efficient circulating pumps is EEI ≤ 0,20

## BENEFITS

- Completely interchangeable with existing models
- Simplified settings
- Easy replacement
- Installation and maintenance
- Energy savings
- Noise control

# PRIUX HOME

## High-efficiency circulating pumps Heating – Air conditioning 50 Hz

## APPLICATIONS

For the accelerated circulation of hot water and iced water in the heating and air-conditioning circuits of single-family houses.

- New and old systems (renovation – extension)

- Installations with and without thermostatically controlled valves
- Installations with radiators and underfloor heating systems
- Thermosiphon-type installations

• Salmson connector

# PRIUX HOME

## DESIGN

### • Hydraulic part

-Single housing with threaded port for direct fitting onto pipework.

### • Motor

-Single-phase, glandless, shaft bearings lubricated by the pumped fluid.  
-Synchronous motor with ECM (Electronically Commuted Motor) technology, equipped with a permanent magnet rotor. The magnetic field rotating around the stator is created by the electronic commutation of the coils.

Protection class: IP X2D

Max. temperature of

the conveyed fluid: TF 95

EMC compliance:  
- 61000-6-1  
- 61000-6-2  
- 61000-6-3  
- 61000-6-4

## IDENTIFICATION

Priux home 4 0 - 25 / 180

High-efficiency pump

Residential application

TDH at 0 m<sup>3</sup>/h

DN (nominal diameter) of ports:

Port-to-port distance of pump housing

## BASIC CONSTRUCTION

| Main parts                | Material           |
|---------------------------|--------------------|
| Pump housing              | Cast iron          |
| Impeller                  | Composite material |
| Shaft, jacket and air gap | Stainless steel    |
| Suction ring              | Stainless steel    |
| Shaft bearings            | Graphite           |
| Gasket                    | Ethylene-propylene |

## BENEFITS

### • Energy savings

-Conforms to the European Directive: E rP 2013 and ErP 2015.

-Energy savings of up to 90% compared to old-generation circulating pumps.

-Minimum consumption: 4 watts.

-Display of current consumption.

### • Noise control

-Elimination of whistling and hydraulic noises thanks to electronic speed variation.

### • Completely interchangeable with existing models

-3 sizes of motors: 4 m, 6 m and 8 m.

-Two types of port-to-port distances: 130 and 180 mm.

-All types of connections: 1", 1 1/2" and 2".

### • Simplified settings

-Just one setting dial.

-LED display of the manometric head.

-Choice of regulation mode according to the installation.

### • Easy replacement

-Markings for selecting the manometric head.

### • Installation and maintenance

-Requires less space.

-Salmson connector: no tools required

-Automatic degumming.

### LED display

- On installation, accurate setting of the manometric head in increments of 0.1 m.
- Then display of current electric consumption to inform the user.

### Electronic switching, permanent magnet motor

### Selection of setting mode

- $\Delta_{pv}$  (variable pressure) for systems with radiators

- $\Delta_{pc}$  (constant pressure) for systems with underfloor heating.

### Activation of venting function

- 10 min cycle to protect the system.

### Automatic degumming

### Just one setting dial

- Markers showing equivalence with the old 3-speed circulating pumps.
- Easy replacement.

### Salmson connector

- Tool-free connection.
- Separation of electrical and hydraulic connections for greater safety.

## SETTINGS

### Setting the Manometric Head

La rotation du bouton blanc permet d'afficher sur l'indicateur à LED la hauteur manométrique en m.

For easier settings, the white dial may be set to the symbols I, II or III on the  $\Delta pc$  scale, which are marker points showing equivalence with the old 3-speed circulating pumps.

**4.3 m** Factory setting: 1/2 max. manometric head -  $\Delta pv$ .

### Electricity consumption

In operating mode, the current power consumption is displayed in W.

### Regulation function:

With this regulation mode, the differential pressure (manometric head) can be reduced electronically in the event of a reduction in the flow rate, according to the predefined differential pressure setpoint value.

With this regulation mode, the differential pressure of the circulating pump is kept at a constant level electronically, regardless of the flow rate, according to the predefined pressure setpoint value.

**Recommended regulation mode for heating systems with thermostatically controlled valves**

**Recommended regulation mode for installations with an underfloor heating system and for Thermosiphon-type installations.**

### Venting function:

**Primary purpose:**  
When first started up, this function allows for the venting of air bubbles contained within the Priux home rotor chamber.

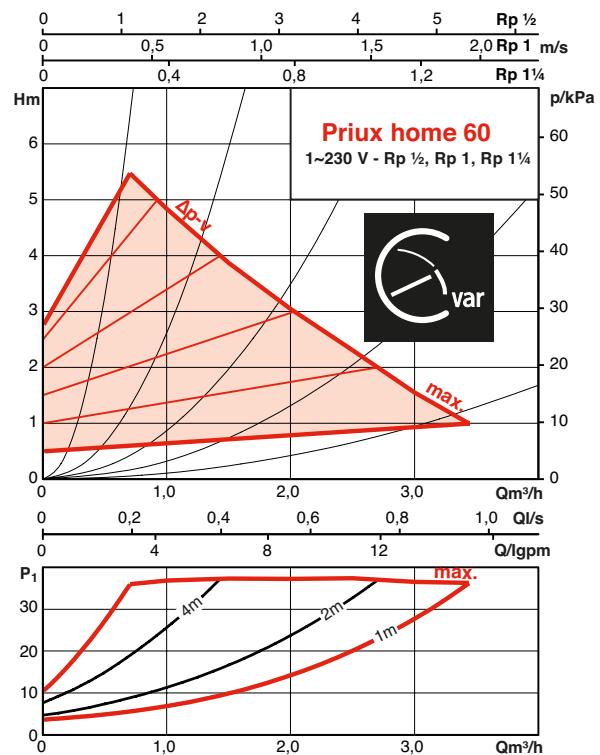

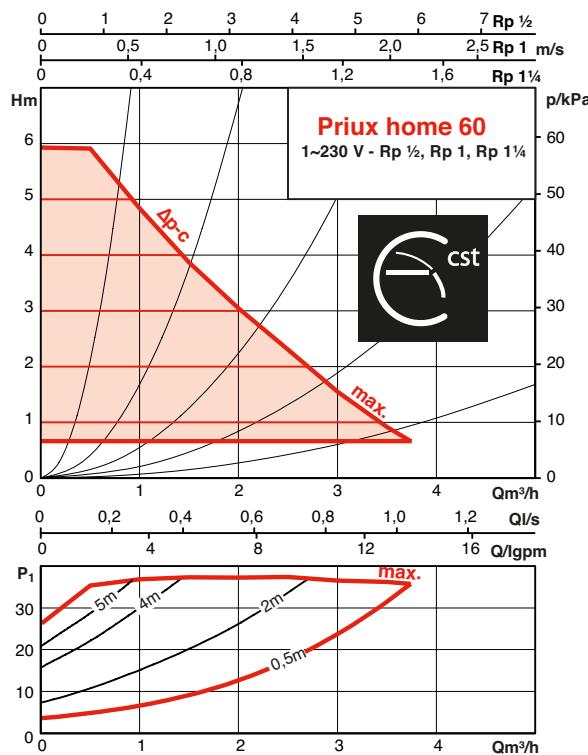

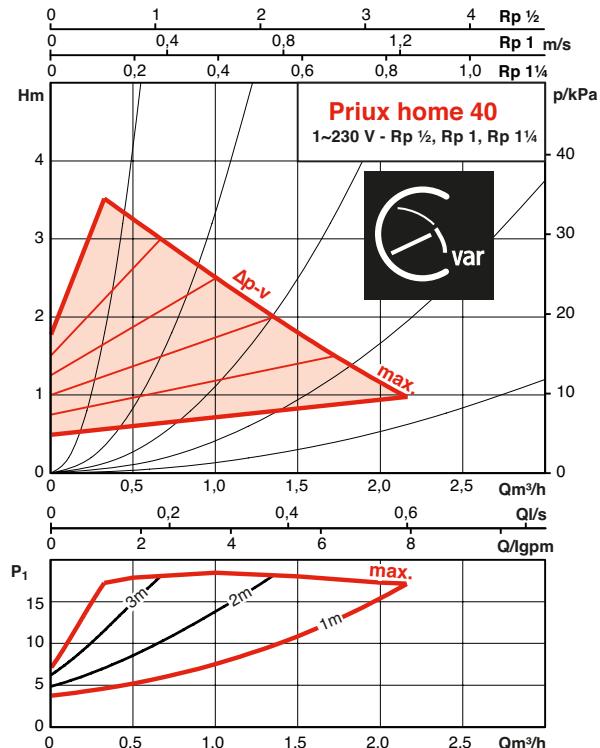

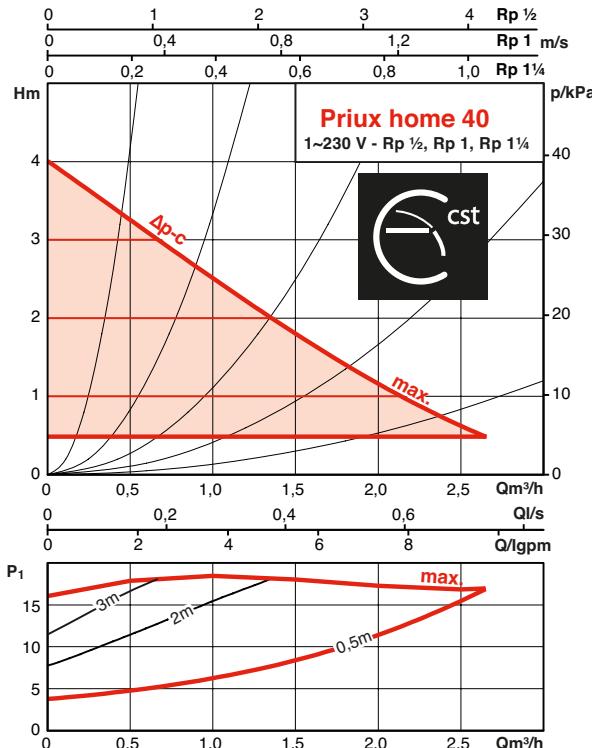

#### Secondary purpose:

This function also supports the venting of the heating system. As it operates, air bubbles trapped within the system are released and then conveyed to the highest point of the system (deaerator).

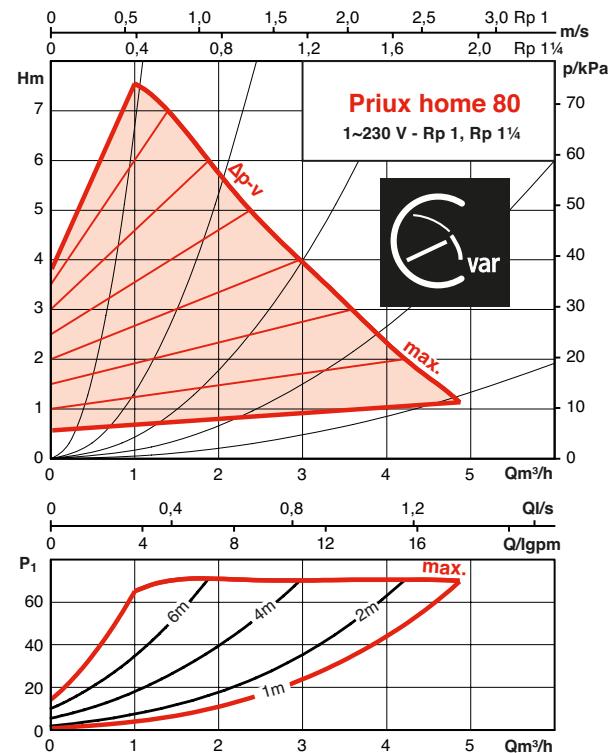

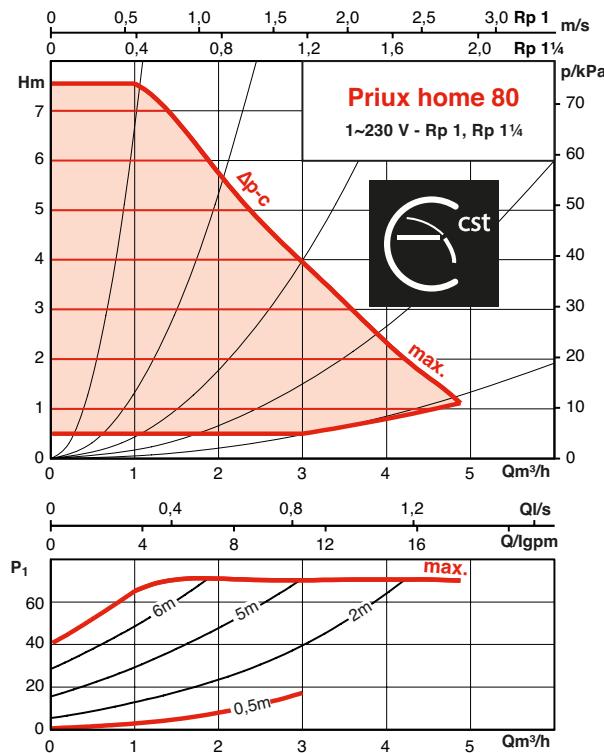

**The "venting" function lasts for 10 minutes. After these 10 minutes, the manometric head must be reset, otherwise the circulating pump will return to the factory setting.**

## SPECIFICITIES

### a) Electrical

- 230 V - 50 Hz single-phase (60Hz).
- Motor protection by a circuit breaker is not essential.

### b) Installation

- Motor axis always horizontal.
- Connection to system by pipe unions.

### c) Packaging

- Delivered with connector and gaskets, without pipe unions.

### d) Maintenance

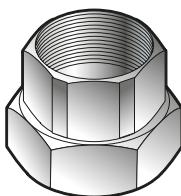

- Standard exchange of the appliance.

• ØG 1"1/2 - 2" Adapter rings Ref. 4051850

• Shut-off ball valve RU 2634 -  
Ref. 4104734

• Pipe union

• Insulating housing Ref. 4160237

• 2 m cable with side connector (in sets of 10)
